

TEKREX[®]

Case Studies

Customized CNC Router

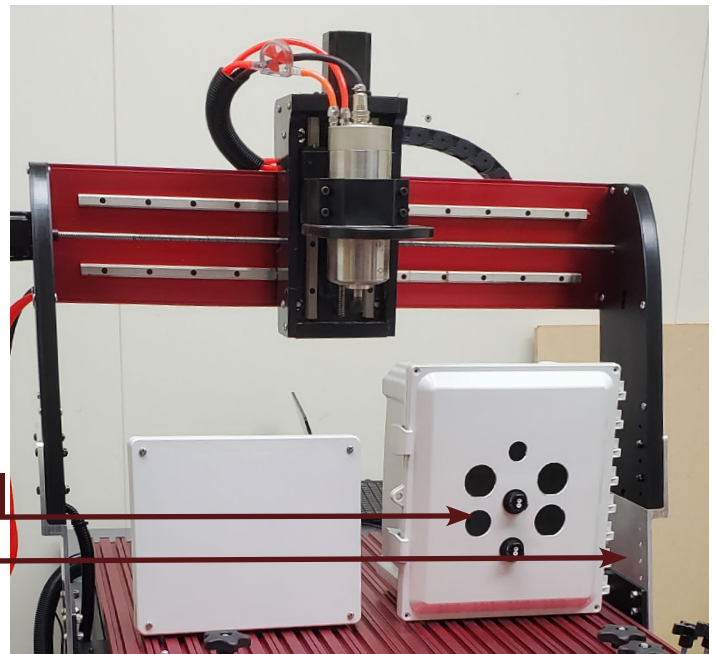

A company wanted to customize off-the-shelf enclosures for their products. The volumes the company was planning to produce justified them investing in their own CNC router to customize the products in-house.

Challenge

Our Solution

TekRex stepped in to help decide which machine to purchase and then modified the machine so that it could accommodate the larger dimensions of the enclosure by machining gantry extensions.

TekRex had the new machine up and running in time for the company to start its new product line and trained the company's staff to be able to operate the machine safely and efficiently.

Customized Product

Gantry Extensions

Results

By machining in-house, the company is on track to save thousands that it would have otherwise paid in outsourcing.
